

This 'Running in Board' at the south end of the station was installed in 2006 although the posts were already in place. The chimney casting on the left was originally fitted to pannier tank 1501 but became cracked and is now a collection box to raise funds for the repair of this locomotive. The building in the background is the machine shop which is used for minor repair work to locomotives and for making small items needed for restoration of coaches and wagons.
